can you tell me from where i can get free domain for website hosting?

can i get free domain from github student pack?

so tell me where i can get free domain
where i go
which is authentic
i don't want to pay anything

i have logged in namecheap for domain
now guide what i have to do

i am using friend account where he have domain

through namecheap can we get domain?

on namecheap website i am here what should i do?
advance DNS ? for domain

hey listen i tell you story that
i have deployed my project on ec2 server aws and also
add the load balancing and auto scaling on that
now i want to attach domain on that website
now guide me what do i with this?

3 Go to Namecheap Advanced DNS ----- 1. Log in → Domains → **programpeer.com → Advanced DNS** 2. You will add either **A Record or CNAME** depending on setup: ### Option A: Using **ALIAS / ANAME / CNAME Flattening** (preferre...

which is production level work
and which you prefer to do?

if you **don't want to move DNS to AWS**

can you explain me what is dns why we use it and what do you mean by don't want to move?

if i don't move my dns then i only have to add records in the advanced domain setting ?
and if i want to move to aws then what?

Root domain (`@`)

what do you mean by root domain
what is this?

14 / 18

Option A: Namecheap Advanced DNS (CNAME / ALIAS / Redirect) -----

----- **Pros:** * Simple, no need to move DNS to AWS * Works fine for `www` subdomain
Cons / Limitations: * Root domain (`@`) cannot be a CNAME normally, so yo...

i will go with option A

i am confused
what to do
please tell me correct way

One important next step (VERY recommended) ----- If not already done: * Create **SSL certificate in AWS ACM** * Attach it to your **Load Balancer** * Ensure your ALB listener has **HTTPS (443)** Then your site will be fully production-grade 🔒

how to do this?
